

What Senseal's Customers Say About

Multi-Primer

- 💧 "I believe your Clear Penetrating Epoxy Sealer [CPES – Multi-Primer] is the best sealer I've ever used." Bruce MacKenzie, Senior Shipwright, USS Constitution, Baltimore, MD, USA.
- 💧 "The products are as advertised – which is exceptional these days." D.M.
- 💧 "Senseal's products work! Restoring a 63 foot Alaskan Trawler, they saved me about two years and great expense. Use them – they're fantastic!" D.M.
- 💧 "I have used Multi-Primer on my boat, the "Vixen," built in 1904, houseboat and house – the dry rot bugs hate me for it." H.O.
- 💧 "I used Multi-Primer simply as a primer on some areas of my boat's hull where paint wouldn't stick, mostly due to oil-soaked wood. The stuff worked great. I'm restoring the boat now with a new bottom, and let me tell you, it was tough getting the paint off where I had primed with Multi-Primer!" R.V.
- 💧 "I had a couple of shaft logs (wood around where the propeller shafts go from inside to outside the boat) with electrolysis damage, a 1964 36-foot cruiser with twin 238s (cubic inch engines). What this means is that the fibers were there but there was nothing holding them together. Well, not that bad, but not that good either, so...I got to thinking and reading and came up with a plan. If I could dry out those shaft logs, they would soak up Multi-Primer like a sponge. The flexible nature of Multi-Primer would be a close approximation of the Lignin (the natural glue in wood that holds the fibers together) that was damaged by the electrolysis. Great theory, but how to test...Well, I had an old hunk of rotting wood that was crumbling to bits before me. I soaked it, and looked at the result. It was much better than I expected, and the test material was much worse than the shaft logs...I decided to go forward...I soaked it, but good...the next day...I saturated it a second time. Now, due to work, I was out of town for a week, so when I came back it was done. WOW! Solid wood, that was not "crispy" like **** * [another epoxy system's] stuff. I was able to run screws in it, and there was no cracking. The end result was I spent two weeks and saved \$10,000." C.C.

Other epoxy makers claim their products are the best...
