

## Multi-Primer

### *Advantages over other epoxy sealers...*

#### **1. MULTI-PRIMER FOR TIMBER PROTECTION**

Multi-Primer is a two part epoxy which is unique for two main reasons:

- First, because it is made from *natural timber resins* which give it unmatched compatibility and advantages for use on any timber; and,
- Second, because it is dissolved in a *purpose designed solvent mix* that will penetrate oils, sap and moisture.

#### **This gives Multi-Primer the following unique features:**

- It penetrates and seals deeper into any wood;
- It permanently bonds to the wood fibres and bonds the fibres to each other;
- Unlike any other epoxy, it retains similar flexibility to wood;
- It chemically bonds to (glues down) any paint, varnish or urethane finish (if they applied when Multi-Primer is only half cured. Otherwise sanding is required for an ordinary strength bond when fully cured);
- It will, unlike any other epoxy, successfully cure down to -2 degrees C;
- It is easy to mix. Stir Part A and B together, in a ratio of 1:1; and,
- It is easily applied with cheap bristle brushes or a roller.

Note: In exposed situations it is advised to coat Multi-Primer with a UV resistant finish.

#### **These features mean that Multi-Primer is more effective than ANY other wood epoxy**

Multi-Primer is more effective than any other timber epoxy treatment in sealing, stabilising, strengthening, waterproofing and rot-proofing wood, while simultaneously achieving unmatched paint or varnish adhesion which will more than double the life of the coating finish (including clear finishes).

#### **The results are amazing!**

Wood, even in the most extreme weather conditions, is transformed into a long lasting weather proof material. You save money and time by preventing costly deterioration of timber structures and by greatly reducing the need and cost of coating maintenance.

#### **Use Multi-Primer on any wood as a primer before painting or varnishing.**

Essential for any wood on boats and marine structures. Ideal for timber windows, doors, floors, decking, pergolas, weatherboards, fascias, outdoor furniture, wet area cabinets, woodcarving, woodturning, musical instruments.

#### **2. MULTI-PRIMER FOR ROT REPAIR**

*No other product can 'permanently' restore rot damaged wood like Multi-Primer.*

The same features that make Multi-Primer so effective for timber protection, also make it unmatched in its ability to restore rot damaged wood. Its unique ability to penetrate, seal and flexibly bond wood, enables it to glue the loose timber fibres of rotted wood back together, restoring original strength and flexibility and making the restored wood permanently waterproof and rot-proof: See the 'three step method' for repairing rotten timber at [www.senseal.com.au](http://www.senseal.com.au).

***Multi-Primer is the highest quality epoxy sealer in the world for wood!***
